

MANAGEMENT AGENT

Resident request classifier

Condominium operations prototype

Working local website with an offline classifier and Ollama inference

Resident intake

A resident writes a message

Staff can add a location

10 fixed request categories

Actual app screen with a synthetic resident message

Classifier workflow

01 Resident message

The website passes the request to this project's Classifier.

02 Safety screen

Explicit urgent reports bypass the model and require staff triage.

03 Selected classifier

Offline TF-IDF baseline or local Gemma through Ollama.

04 Validation and review

Staff inspect the category, priority, evidence and suggested team.

Structured classification

MANAGEMENT AGENT
Condominium operations · Phase 01

Classification engine
Offline baseline

Review threshold
0.60

Scores below this threshold need review.
Scores are not validated accuracy.

Runs locally on 140 synthetic examples. No API key or model download needed.

Current scope
Classify · Triage · Review
Ticketing, RAG and autonomous agents belong to later phases.

Try an example
Choose a sample request

Request
The corridor light outside #05-12 keeps flickering.

Channel: Web
Location (optional): Block A, level 5

Classify request

Classification only. No tickets, messages, payments or approvals are created.

Deploy

Classification ready for review

Maintenance
Priority: Normal
Model score: 73%
Suggested team: Maintenance team
Location: Block A, level 5
baseline · tfidf-logistic-v1 · 10 ms

Scores are uncalibrated estimates, not the probability that this decision is correct.

Local evaluation results

Same 50 ordinary synthetic requests. Five additional emergencies used rules.

Outcome	Offline baseline	Gemma 3
Valid, correct category	48 / 50	42 / 50
Rejected model outputs	0	2
Default website engine	Yes	Optional

gemma3:4b **4.3B parameters** **Q4_K_M** **RTX 3080**

1.12 s average valid warm response 1.32 s including rejected attempts

First cold response: 86.6 s. Measurements: 3 October 2026.

Synthetic development checks. Real resident accuracy remains unverified.

Local startup

1 Open the project folder

C:\Users\Skith\Documents\MSG

2 Run start_project.cmd

The launcher starts Ollama and the website.

3 Open <http://localhost:8501/>

Choose Offline baseline or Ollama in the sidebar.

Offline only: `start_project.cmd -SkipOllama`
